

HEAVY SUBMACHINE GUNS

Unlike handguns that fire in single shot mode, 10 mm weapons like those described in this page can be considered as heavy. I mean, that a SMG is heavy when a normal human being can't use it with a single hand correctly. Even if some 10 mm SMGs are easy to conceal, their fire power can be classified as high. Legally, like any other SMG, those weapons are forbidden in the 2020 city streets.

A very modern design for the italian firm's last creation. The 36 is a prety good SMG, both accurate, because of its scope for long range shot, and deadly with its 11mm bullets inserted in its short and wide clip. As a conclusion, the PM 36 is an expensive but reliable weapon. Federated Arms and Beretta are still arguing about its design, accusing each other of corporate espionage.

When Dai Lung decides to copy a competitor, he doesn't do things halfway !
