

VERY HEAVY SUBMACHINE GUNS

Heavy SMGs have flourished after the year 2000, mainly due to the appearance of light personal armour. They are now bulkier and so less concealable, with a firepower that requires a strong hand to be hold them. Usually the equivalent of the previous century's rifles in every aspect but the size. Heavy SMGs are primarily used by police corps, military commandos, and above all corporate forces or militias.

Possibly the heaviest SMG type in the world ! The P6, technically very close to an assault rifle, uses the 6 mm caseless cartridge created for the H&K G6 gun. Unfortunately, the American firm could not mimic the accuracy nor the revolutionary rotating clip of the german SMG. The result, even if one admits an originality in the shape, is a quite inaccurate and slow automatic weapon, which explains for its poor sales.
